

Filmmaking Tungsten Lighting Fixtures 1

PLAY PICMONIC

Redheads

Redhaired Scarlett Johansson

Redhead lights are a staple in smaller film productions, these lights put out a healthy 650-1000W of tungsten light. Due to their red chassis, these lights are classically known as redheads, regardless of the actual brand or product designation.

2K Blonde

Blonde Scarlett Johansson

Like their name implies, 2K blondes are yellow chassis lighting fixtures that can output 2000 watts of tungsten light, which is a decent amount of light. Like redheads, "2K Blondes" refers to a classification of light rather than a specific brand or name of light.
