

## Filmmaking Tungsten Lighting Fixtures 1

PLAY PICMONIC

### **Redheads**

#### [Redhaired Scarlett Johansson](#)

Redhead lights are a staple in smaller film productions, these lights put out a healthy 650-1000W of tungsten light. Due to their red chassis, these lights are classically known as redheads, regardless of the actual brand or product designation.

### **2K Blonde**

#### [Blonde Scarlett Johansson](#)

Like their name implies, 2K blondes are yellow chassis lighting fixtures that can output 2000 watts of tungsten light, which is a decent amount of light. Like redheads, "2K Blondes" refers to a classification of light rather than a specific brand or name of light.
